Pretoria, South Africa

Education

University of Pretoria, Pretoria

Bachelor of Science in **Information and Knowledge Systems**

Concentration: **Computer Science and Software Development**

Relevant Coursework:

Data Structures and algorithms, Concurrent Systems, Software Engineering, Database Systems, Computer Security, and ethics.

About

Final year BSc Information and Knowledge Systems student at the University of Pretoria, specializing in Computer Science and Software Development. I am aspiring Software Engineer with a deep interest in building scalable, secure and efficient systems. My expertise spans the full stack from crafting modern interfaces in React and Vue.js to engineering low-level networking tools and multithreaded systems using Go, Java and C++. With a proven track record in Lead integration and DevOps roles, I am committed to technical excellence, containerized deployments and writing highly maintainable, documented code.

Skills

- **Programming Languages:** Proficient in C#, C++, Java, Go, JavaScript (ES6+), PHP, and Python.
- **Web Frameworks & Tools:** Experience with ASP.NET Core, Express.js. Vue.js, Angular, and React.
- **Systems & Architecture**: Strong understanding of Multithreading and concurrency (C++, Java), API development, and software design patterns.
- **DevOps & Infrastructure**: Skilled in containerizing applications with Docker and automating deployments via GitHub Action CI/CD pipelines.
- **Databases & Security:** Knowledgeable in Relational, NOSQL, and Object-oriented databases, alongside CIAAA security principles and encryption.

Projects

- **Secure File Sharing Platform**

    - **Repository:** SecureFileSharingPlatform
    - **Description:** Built a file sharing system with end-to-end encryption ensuring access only to intended users.
    - **Role:** Lead Integration Engineer and Developer Operations (CI/CD)
- **E-commerce Store**
    - **Repository:** PLM-18/OnlineStore
    - **Description:** Angular frontend with C# .NET API backend supporting cart, checkout, and user auth.
- **Workout Application**
    - **Repository:** PLM-18/WorkoutApp
    - **Description:** Mobile fitness app built in Ionic for workout tracking.
- **POP3 Client**
    - **Repository:** PLM-18/POP3Client
    - **Description:** Developed a custom Post Office Protocol (POP3) client using raw sockets to facilitate communication with mail servers. Implemented core protocol commands to retrieve, list, and manage email data directly from the server.
- **FTP Server**
    - **Repository:** PLM-18/FTPSERVER
    - **Description:** A file watcher that implements the ftp protocol by updating a file on a server using ftp whenever it is changed using basic sockets.
- **Version Control Site**
    - **Repository:** PLM-18/VersionControlSite
    - **Description:** Collaborative coding platform with real-time file editing.
